

PERFORMANCE INNOVATION STYLE PROTECTION SMARTER OPTICS

ABOUT SCOPE OPTICS

Scope Optics is an independent, privately owned Australian company that delivers innovative and uniquely styled safety eyewear – high quality gear that's also affordable.

Established in 2005, its founder built upon over three decades of industry experience to develop a reputable brand with a real difference and a defined attitude.

Today Scope is a sought-after name in industries such as mining, healthcare, construction, manufacturing and many others.

Whether for work or play, Scope Optics protects vision with style.

To ensure quality assurance, Scope only contracts experienced high end manufacturers which are continuously independently audited and accredited to some of the world's highest standards, including Australia and New Zealand.

Our aim is not to be the biggest. We want to be the best. In everything we do, from our leading edge design products to our efficient customer service, Scope Optics provides the ultimate safety eyewear experience.

CERTIFIED VS COMPLIANT

YOU DON'T NEED COMPLIANT. YOU NEED CERTIFIED

Many products claim to be compliant and others claim to be certified. What's the difference? And why does it matter when it comes to industrial eyewear?

The fact is that when industry standards are set, unless they are enforced by governments, they are often just voluntary. That means that manufacturers are free to promote their products as being "compliant", even if that is only based on self-testing. As standards are not enforced in Australia or New Zealand, the only way to ensure compliance is through certification.

REST ASSURED – SCOPE OPTICS PRODUCTS ARE CERTIFIED

At Scope Optics, we believe in adhering to a superior standard so that our customers can be sure of safety and reliability. That's why our products are examined by a third-party, independent certification body.

When you see the internationally recognised five ticks of the SAI Global logo or distinctive BSI Benchmark logo on one of our products, you'll know it has been rigorously tested and meets the requirements of our industry's standards.

Independent certification also ensures regular testing, which means you can always trust Scope Optics products to deliver a consistently high level of performance.

EXTRA CARE. EXTRA VALUE

All Scope Optics products are subject to independent certification procedures. They are assigned unique licence numbers which demonstrate the extra diligence we put into our manufacturing process. We stand behind our products, and we're proud to go above and beyond to show we meet our industry's high standards through certification.

PREMIUM LENS COATING

SCOPE OPTICS INTRODUCES TITANIUM

A high-performance premium lens coating treatment is now available to an exclusive and select range of models.

Offering guaranteed superior performance; this proprietary coating is permanently applied to both sides of the lens, allowing its advanced chemical and physical abilities to act as a long-lasting barrier against superficial scratching and the formation of condensation, especially in conditions of high humidity.

Tested to required performance levels of EN 166 standards for categories

K (resistance to mechanical damage – anti-scratch)

N (resistance to misting/fogging)

PREMIUM PROTECTION

POLARISED LENSES

PREMIUM PROTECTION AGAINST GLARE

Reflected light from surfaces such as water, snow or a flat road is called polarised light or simply better known as glare. This bright and intense light can dangerously reduce visibility, cause eye stress and general discomfort.

To help reduce the effects of glare Scope has designed and developed a series of safety frames incorporating optical grade PC polarised lenses that offer 100% UV protection and certified to AS/NZS 1337.1 for Medium Impact.

Available in the following models:

Cross Fit • Ranger • Jet Stream • Maverick • Genisys • Flash • Beast • Spy • Sniper • Switch Blade • Slide Shield • Street Walker

See full collection | Page 85.

SMART VUE LENS PHOTOCHROMIC TECHNOLOGY

PREMIUM PROTECTION AGAINST UV AND VARIABLE LIGHT

Our Smart Vue lenses darken to a sunglasses tint when exposed to sunlight or UV ultraviolet and return to a clear state when indoors, away from the sun's rays.

As UV rays can penetrate even on cloudy days, the advanced lens technology in Smart Vue will continue to adjust to varying light levels automatically.

These superior lenses are designed to ensure a comfortable lens tint is always maintained whilst offering 100% protection against damaging UVA and UVB rays.

Certified to AS/NZS 1337.1 for Medium Impact.

Available in the following models:

Cross Fit • Ranger • Genisys • Switch Blade • Slide Shield

UV - ULTRA VIOLET

Invisible rays of radiant energy with wavelengths that range between 200-400nm. UVA and UVB rays are considered harmful to your eyes and skin that can be generated by solar or artificial sources.

BLUE LIGHT

Has a wavelength of between approximately 380nm-500nm. Although one of the shortest, its highest energy wavelength can damage the retina, cause eyestrain, fatigue and headaches. Main sources are sunlight, fluorescent and LED lighting, digital screens and electronic devices.

IR - INFRA RED

IR rays have a longer wavelength than visible light and are also known as heat rays. Long term exposure can lead to lens, cornea and retina damage. Main source - The sun and mechanically generated such as gas welding.

NM - NANOMETER

The unit measure of a light wave. 1 nanometer = 1 billionth of a meter.

UV385 LENSES

Filter out 100% of UV rays up to 385nm and are mainly used in clear lenses.

UV400 LENSES

Filter out 100% of UV rays up to 400nm and are mainly used in tinted lenses.

BASE LENS

Refers to lens curvature and denoted by a numeral prefix. Most wraparound designs would generally have a measured curve of 8 plus.

MEDIUM IMPACT

Eye protectors that are tested to Medium Impact as per the requirements of AS/NZS 1337.1:2010. This includes subjecting the eye protector to front-on as well as side impact by using a 6 mm steel ball projected at a speed of 45m/sec (162km/h). The Medium Impact classification is the highest level of protection that can be given to eye protectors which includes goggles.

LENS CLASSIFICATION

LENS CAT	DEFINITIONS
0	OUTDOOR UNTINTED OCULAR NO sunglare reduction - Adequate UVR protection 100% - 80% transmittance
1	OUTDOOR TINTED OCULAR LIMITED sunglare reduction - Adequate UVR protection 80% - 43% transmittance
2	OUTDOOR TINTED OCULAR MEDIUM sunglare reduction and good UVR protection 43% - 18% transmittance
3	OUTDOOR TINTED OCULAR HIGH sunglare reduction and good UVR protection 18% - 8% transmittance

MEDIUM IMPACT CERTIFIED

Eye protectors that are tested and meet the Medium Impact requirements of AS/NZS 1337.1 are examined and certified by a third-party independent certification body.

Independent certification also provides manufacturers with an individual license number, which signifies registration and waives an ongoing testing program to ensure product production delivers a consistently high standard of quality and performance.

SMART VUE (PHOTOCHROMIC LENS TECHNOLOGY)

Photochromic lenses darken to a sunglasses tint when exposed to sunlight or UV ultraviolet and return to a clear state when indoors, away from the sun's rays.

CO-MOULDED

The bonding of two or more materials during the manufacturing process

Rx READY

A spectacle frame that can be fitted with prescription lenses

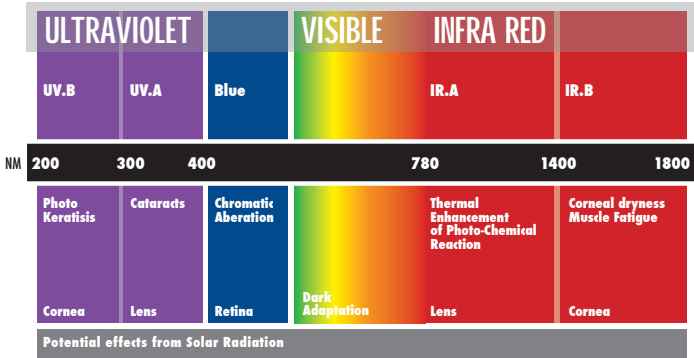

PC LENSES

Polycarbonate lenses are lightweight and up to 10 times more impact resistant than plastic or glass lenses. They also provide up to 99.9% protection from UV rays and can be further treated with a series of coatings such as anti-scratch and anti fog

FRAMES

The majority of our range consist of two main types of materials.

1. Polycarbonate - Lightweight and strong
2. Nylon - Durable and flexible

PRODUCT MARKING

AS/NZS 1337.1:2010

For any safety eyewear product that has been certified to AS/NZS 1337.1:2010, they must display markings either etched or printed into the frame and lenses to indicate what they are approved to.

It is important to note that for a single lens product such as a goggle or shield, the markings are required to be displayed only once.

However, on a dual lens product, markings need to be shown on each lens.

SELECT THE RIGHT DIOPTER

UNDERSTANDING DIOPTER STRENGTHS

A diopter is the magnification strength of a lens and is usually applied to reader-style eyeglasses or bifocals.

Lenses with a maximum focal length of 1 meter, defined as the physical length between the middle of the lens and the point at which items are brought into clear focus of 1 meter, have a strength of 1 diopter.

As the diopter strength is calculated based on the inverse of the lens' focal length, a 2 diopter lens is equivalent to 1/2 meter, a 3 diopter lens is equivalent to 1/3 meter and so on.

This makes it important because magnification intensifies as the lens focal length decreases, which is the main reason why using higher diopter strength lenses allows for sharper, clearer images closer to your eyes.

Younger, more flexible eyes can keep up with both near and far objects however as we age, our eyes lose flexibility and can no longer maintain focus on near objects without the assistance of readers, bifocals or prescription eyeglasses with appropriate diopter strength lenses.

USE THE BELOW GUIDE TO SELECT THE RIGHT DIOPTER

WITHOUT USING ANY VISUAL AIDS, MAKE SURE TO STAND 35CM AWAY FROM THE BELOW TEXT.

START TO READ EACH LINE FROM THE TOP DOWN.

THE FIRST LINE YOU HAVE THE MOST DIFFICULTY READING IS THE MAGNIFICATION YOU NEED.

SELECT THE RIGHT LENS TINT

CLEAR

91% light transmission - lens category 0

Our perfectly crystal clear lenses provide true optical clarity and protection against UV light

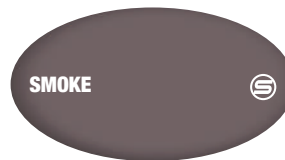

AMBER

88% light transmission - lens category 0

Provides visual contrast and definition in low light situations by absorbing blue light that may cause eye strain

SMOKE

13% light transmission - lens category 3

Our general multi purpose outdoor lens provides crisp optics with excellent UV and glare protection

COPPER

24% light transmission - lens category 2

This brown lens shields the eye as it filters out glare and visible blue light. Its characteristics provide true colour recognition and excellent depth perception, an optimal driving lens

SILVER MIRROR

13% light transmission - lens category 3

A neutral grey base lens coated with a highly reflective silver mirror finish. Ideal protection against sun glare as it initially deflects solar rays before filtering UV

BLUE MIRROR

13% light transmission - lens category 3

A neutral grey base lens coated with a highly reflective blue mirror finish. Ideal protection against sun glare as it initially deflects solar rays before filtering UV

RED MIRROR

13% light transmission - lens category 3

A neutral grey base lens coated with a highly reflective multi red mirror finish. Ideal protection against sun glare as it initially deflects solar rays before filtering UV

GREEN MIRROR

13% light transmission - lens category 3

A neutral grey base lens coated with a highly reflective green mirror finish. Ideal protection against sun glare as it initially deflects solar rays before filtering UV

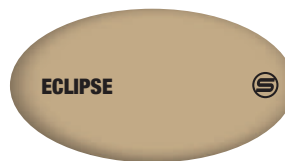

YELLOW MIRROR

13% light transmission - lens category 3

A neutral grey base lens coated with a highly reflective yellow mirror finish. Ideal protection against sun glare as it initially deflects solar rays before filtering UV

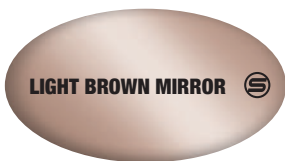

ECLIPSE

44% light transmission - lens category 2

A light brown base lens coated with a clear reflective mirror finish. Ideal for low light outdoor conditions as it provides clarity and contrast with UV protection

LIGHT BROWN MIRROR

48% light transmission - lens category 1

A great lens to use under artificial light or in low light outdoors. It increases contrast by filtering blue light whilst providing adequate UV protection

POLARISED

13% light transmission - lens category 3

Our standard injection molded Polycarbonate polarised lens is calming and relaxing to the eye. It provides excellent glare protection in any light condition and provides excellent colour definition

SMART VUE

82%-12% - lens category 0-3

Advanced injection molded technology is applied to this exceptional UV reactive lens. Active with in seconds of UV exposure, it offers the right amount of visible light filtration and UV protection in any outdoor conditions

PREMIUM SAFETY EYEWEAR

CROSS FIT

JOB SITE. OFF SITE. YOU CHOOSE

NEW

A modern classic re-engineered, the CROSS FIT is next level and like no other. This cutting-edge design combines trendsetting looks and functionality with geared up safety features. With interchangeable temples that make it easy to switch your look from job site to off-site with just a few clicks and a 3D adjustable rubber nose bridge to provide the ultimate customised fit.

These frames are also Rx ready and can be fitted with an optional prescription adaptor with ease. All CROSS FIT frames come standard with a premium soft touch coating that look and feel great and are available in a wide range of lens options, including Sky Blue and Red Mirror, Smoke, Polarised and Smart Vue.

CROSS FIT RX ADAPTOR - 900RX

OPTIONAL

RX ADAPTOR FITTED WITH CLEAR FULL LENS MAGNIFIER
900RX - 1.0, 1.5, 2.0, 2.5, 3.0

Important Note: By switching from a side shield to a non-side shield temple, the Medium Impact rating will be reduced to Low Impact.

KEY FEATURES

RANGER

WORK SAFE, LOOK GREAT

NEW

The cutting-edge RANGER delivers the absolute in stylish protection and performance. Created to protect workers vision in the toughest of conditions, its high-contour dual-lens design ensures total outdoor protection, while its solid and rugged styling delivers a safety sunglass that looks amazing both on and off the job.

Designed to suit a wide range of face shapes, it features a three-point lens inclination system for a customised fit, co-injected rubber temples and nose bridge for added comfort and slip resistance and is finished in our newest frozen matte black frame that looks and feels stunning while also providing excellent durability.

TITANIUM
HIGH PERFORMANCE LENS COATING

KEY FEATURES

SPEED PRO

GEARED TO WORK

The SPEED PRO is a low profile, light-weight and high-performance product designed to seal and protect your eyes from flying debris, dust and impact with its form-fitting SBR rubber gasket.

The co-moulded rubber temples combined with a soft nose piece make the SPEED PRO a comfortable pair of safety glasses to wear all day. These glasses also feature an attachable elastic strap for additional comfort and stability and are included with every pair.

For ultimate protection and performance, SPEED PRO is safety eyewear geared to work every time.

- 8 Includes attachable elastic strap for a more snug and secure fit
- 9 Form fitting SBR rubber gasket creates a positive seal and safeguards against airborne dust and contaminants

KEY FEATURES

JET STREAM

PROTECTION, ABOVE AND BEYOND

The JET STREAM is the ultimate full wrap frame that provides superior protection in a sleek and high-quality finish. The 8 base wraparound design is fitted with an EVA dust gasket providing maximum protection against sun, wind, dust, glare, and impact.

The anti-slip rubber nose pads provide a secure fit, while the ergonomically designed co-moulded temples comfortably grip and adjust to various head contours. The polycarbonate frames are lightweight, durable and feature a fully adjustable elastic strap that can be easily connected, providing additional comfort and stability.

SMART FEATURES

- 1 One piece distortion free moulded lens
- 2 8 base curve lens design provides excellent wraparound protection
- 3 Super soft rubber nose bridge provides comfort and slip resistance.
- 4 Fully coated anti-fog/anti-scratch lens
- 5 Extended temple design for increased side protection
- 6 Compatible with optional Rx adaptor, providing more flexible prescription friendly solutions
- 7 Flexi-Max temples self-adjust to various head contours for a secure and pressure free fit

KEY FEATURES

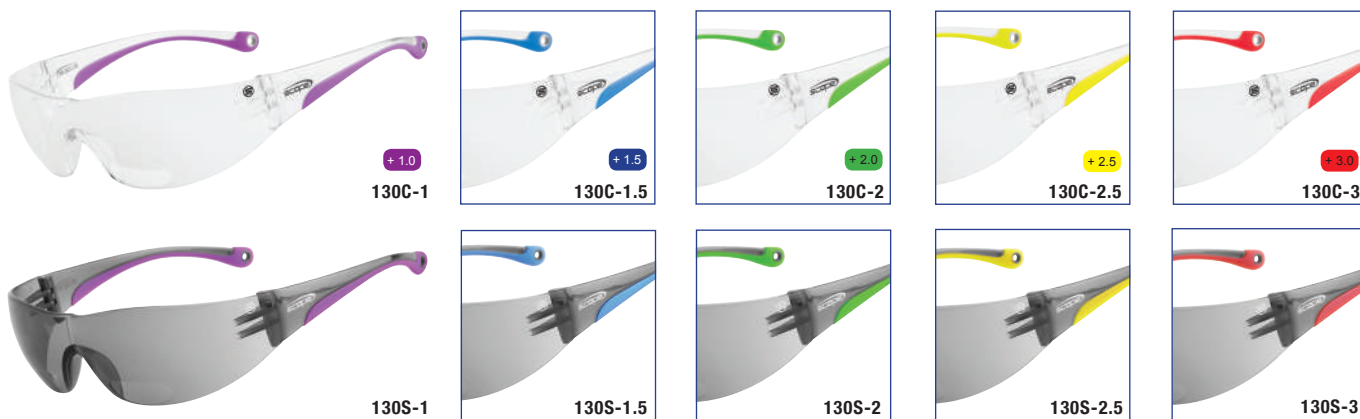

MAXVUE

MINIMISE RISK. MAXIMISE VISION

The MAXVUE range offers an innovative and unique feature of a built-in reading diopter that combines protection, comfort, and convenience to workers who require safety and reading glasses on the job.

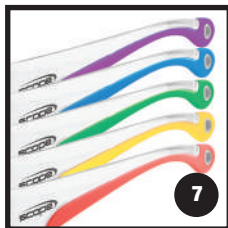

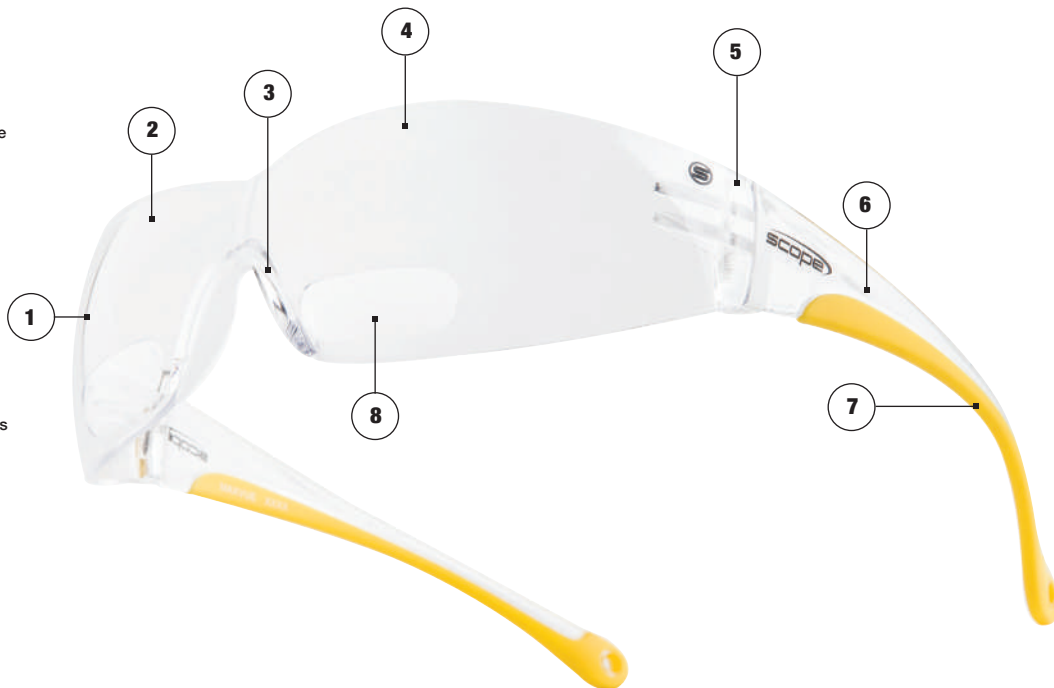

Made from high impact-resistant polycarbonate, the lightweight frame has a rimless design and combined with our signature Flexi-Max co-moulded temples, provide a comfortable and secure fit. They are also colour-coded, making each temple easy to differentiate between the five varying diopter strengths made available.

SMART FEATURES

- 1 8 base curve lens design provides excellent wraparound protection
- 2 Strong and flexible one-piece moulded polycarbonate lens
- 3 Moulded nose bridge
- 4 Fully coated anti-fog/anti-scratch lens
- 5 Lightweight polycarbonate frame
- 6 Extended temple design for increased side protection
- 7 Colour coded Flexi-Max temples self-adjust to various head contours for a secure and pressure free fit
- 8 Built-in diopter provides visual assistance and protection

Note: These eye protectors offer in-built magnifying reading panels designed to enhance vision whilst providing impact protection against hazardous flying particles. They do not replace the need for prescription eyeglasses, and regular eye examinations are encouraged to maintain healthy sight. These products have been tested and meet the requirements of AS/NZS 1337.1 for Medium Impact.

KEY FEATURES

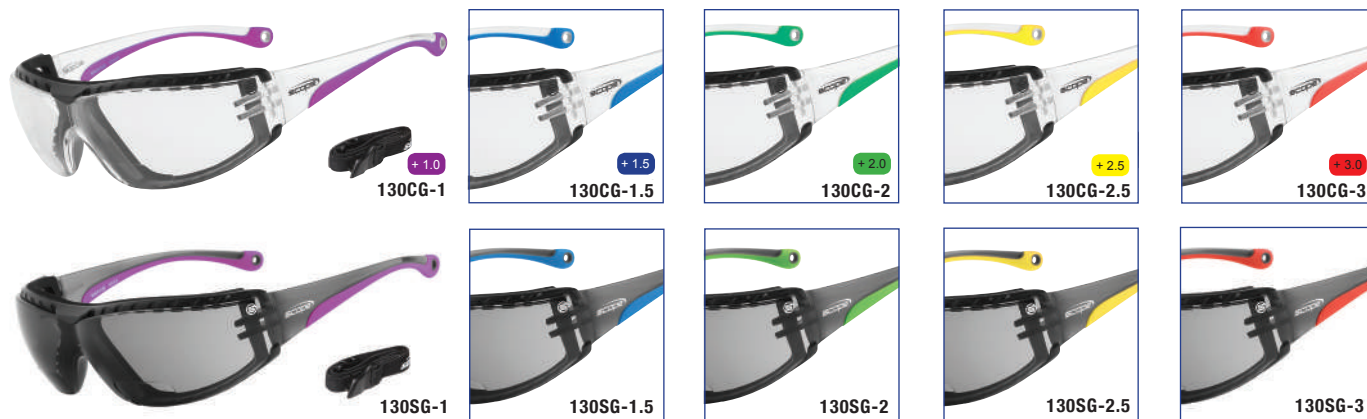

SUPER MAXVUE

PROTECTION TO THE MAX

The SUPER MAXVUE combines all of the great high-quality features of the standard MAXVUE model but with upgrades and extras. It includes a form-fitting SBR rubber gasket for extra protection, Titanium high-performance anti-fog/scratch lens coating, and a fully adjustable elastic strap that lets you easily connect, providing additional comfort and security. Also available in five varying diopter strengths with matching colour-coded temples.

QUALITY SAFETY EYEWEAR

OVERCOAT

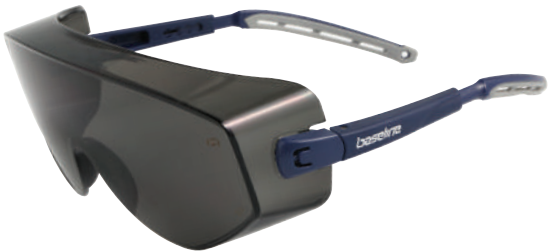

SAFETY ALL COVERED UP

The OVERCOAT is the ultimate option for workers who already wear prescription glasses but need additional eye protection in hazardous environments.

The single-piece polycarbonate lens easily fits over existing frames due to its fully adjustable features, including three-point lens inclination and co-moulded thermoplastic temples, allowing a four-point length setting for a customised fit.

BL 29C

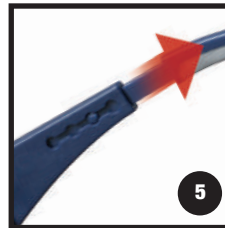

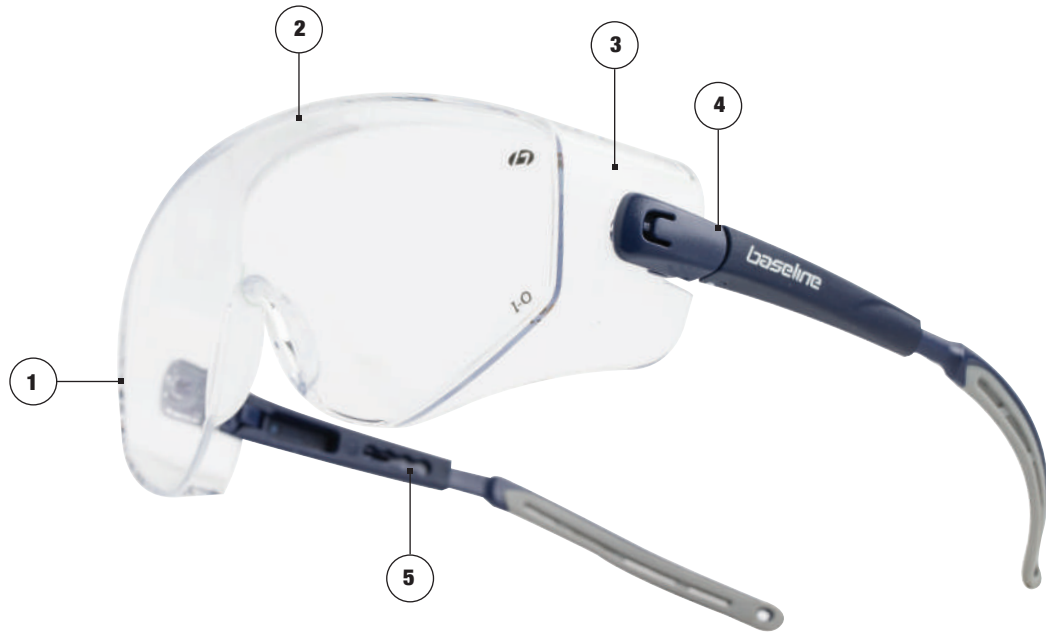

BL 29S

Reference	Frame	Lens Tint	Lens Coating	VLT	Filters	Cat	Light Condition
BL 29C	Blue	Clear	Anti-Scratch	91%	9%	0	Indoor Dim, Night
BL 29S	Blue	Smoke	Anti-Scratch	13%	87%	3	Outdoor Bright

SMART FEATURES

- 1 One piece distortion free moulded lens
- 2 Light-weight and specifically designed to fit over prescription spectacles
- 3 Integrated lens design provides cheek/brow and side coverage
- 4 Temple inclination adjustable to 4 positions
- 5 Ergonomically optimised co-moulded rubber temples are extendable to 4 positions

KEY FEATURES

DRONE

STRATEGIC PROTECTION

The DRONE is a lightweight safety spectacle designed with an 8 base curve one-piece polycarbonate lens for maximum eye protection.

It features a metal-free dielectric frame, pressure-free co-moulded thermoplastic rubber temples, and a soft and flexible self-adjusting nose bridge, ensuring complete comfort during extended wear.

BL 81C

BL 81S

FOGSTOP PREMIUM ANTI-FOG SOLUTIONS

FOG STOP OPTIX SHAMMY

- 1 FS-OS10
COUNTER DISPLAY BOX
10 PACK
- 2 FS-OS1
HANG SELL SINGLE PACK

FOG STOP OPTIX WIPES

- 3 P/N FS20
(CONTAINS 20 WIPES)
- 4 P/N FS100
(CONTAINS 100 WIPES)

FOGSTOP OPTIX SHAMMY is a premium high-performance dry cloth treatment that quickly and effectively stops fog on all kinds of eyewear, including safety glasses, goggles, visors and even lenses with anti-reflective coatings. The quick and easy wipe-on application goes on clear without smearing and provides long-lasting protection for up to 24-72 hours. Each shammy is reusable up to 60 times and supplied with a flip-top protective carry case.

Unlike other wipes, FOGSTOP OPTIX WIPES are specifically formulated to effectively clean and stop fog in one wipe. Comprised of highly advanced anti-fog properties impregnated with a combination of non-toxic cleaning and polishing agents, these convenient, individually wrapped pre-moistened wipes are suitable for use on all kinds of eyewear including safety glasses, goggles, visors and hard surfaces such as mirror and glass.

CASES & CORDS

SPEC JACKET - P/N 0103

Semi hard neoprene finish general spec case. Holds any style. Finished with 2 stitched belt loops and dog clip connector.

MONSTER SPEC CASE - P/N 0107

Semi hard spec case. Holds one spec with additional compartments for spare lenses or other components. Clear identification window with separate zip compartment to store lens cleaning wipes. Finished with 2 stitched belt loops and dog clip connector.

GEARBOX - P/N 0105

Hard spec case. Holds one spec with separate centre compartments for 3 sets of spare lenses. Addition top compartment can store FogStop Optix Pen/Wipes. Finished with 2 stitched belt loops and dog clip.

STUDED SPEC SACK - P/N 0106

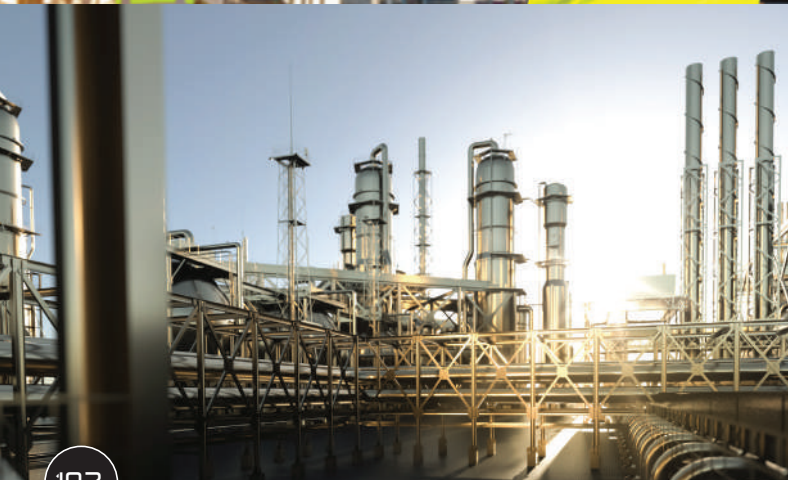

Soft microfiber draw string spec sack with new studded rubberised surface. Turn inside out to use as a lens cleaning cloth.

GRIP CORD™ - P/N 0100

Tension adjustable spectacle cord with easy quick release rubber temple grips. Universal fit Pack size: 10 pcs with retail hanger card

DRONE								
AIR BLADE								
PIT BOSS								

Important note: Before choosing any eye and face protectors, it is vital to carry out a thorough site risk assessment by an authorised Workplace Health and Safety representative to ensure correct and corresponding equipment is issued in compliance with AS/NZS 1336:2014. This standard provides recommended practises and guidance for the selection, care, and use of eye and face protectors worn to protect workers from the hazards of flying particles and fragments, chemicals, and optical radiation generated by work processes such as welding or solar radiation.

OUTDOOR WORK

COMMON ACTIVITIES & TASKS

• Mowing • Roofing • Drilling • Road works • Driving • Building • Boating • Cutting • Sawing • Maintenance – Parks & Gardens

POTENTIAL EYE HAZARDS

Impact from projectiles, grinder fragments, chips, metal, branches and twigs, small and sharp particles, UV radiation and glare.
